ENVIRONMENTAL AUDIT

DOW CHEMICALS LIMITED

Environmental Audit, land pre-acquisition at Styrene Plant,
South Wales.

A pre-acquisition site audit was undertaken of option land on behalf of Dow Chemicals at its plant in Barry, South Glamorgan.

Anecdotal data was compiled regarding previous land-use and preliminary investigation work.

Further investigation entailed the construction and sampling of groundwater monitoring bores. It was concluded that groundwater contamination has migrated on-site from current adjacent and historical chemical manufacturing, storage and fuel conveyance operations.

Recommendations were made for disclosure to regulatory Authorities and increased groundwater monitoring at its existing and newly acquired sites.
