CONTAMINATED LAND & GROUNDWATER

GLOBAL OLIVINE (WA) LTD

Public Environmental Review (PER), Redevelopment of contaminated land & groundwater at former PICL site, Kwinana, WA

An initial review of the contamination status of the former Petrochemical Industries Ltd (PICL) site in Kwinana was undertaken. Global Olivine proposes to develop a Waste-to-Energy and Water plant on the site.

The site was greenfield prior to 1957, when it was acquired by BP Petroleum as part of the Kwinana refinery development. Approximately 1/3rd of the site was used for refinery waste disposal prior to substantial remedial works in 1988.

The land was purchased by PICL in 1987 although development took place before it's subsequent purchase by LandCorp in 1993

A Public Environmental Review (PER) was prepared in support of the proposed site re-development by Global Olivine.

Specific aspects included et al Environmental Impact Assessments (EIA's) to the Land, Water and Marine environments.
